571-232-4556

Boston, MA

Goals

- Major in Computer Science and minor in Electrical Engineering at Northeastern University.
 - Continue to contribute to open source projects and search for vulnerabilities in widely deployed software.
-

Education

Maret School: Graduated in 2016

Relevant Classes:

- AP Computer Science
- Independent Study in Computer Science: Rust

Northeastern University: Graduation in 2020

Relevant Classes:

- Fundamentals of Computer Science 1
 - Discrete Structures
-

Skills

- Proficient with Python and Rust
 - Web security and bug bounties
 - Experienced with Bash for scripting
 - Basic knowledge of LaTeX and C++
 - Basic knowledge of embedded electronics
-

Previous Work and Experience

HackerOne (Winter 2015 - Now)

Independent Security Researcher on the HackerOne Platform (hackerone.com/ddworken)

- One of the top 10 ranked researchers on Ubers bug bounty
- Reported vulnerabilities to over three dozen different companies
- Publicly disclosed numerous reports as a learning resource for other researchers

Northeastern University (Fall 2016 - Now)

Student researcher at Northeasterns College of Computer and Information Science

- Created a Raspberry Pi appliance to automatically provision Tor Hidden Services for all connected devices
- Wrote a custom Intrusion Detection System (IDS) that automatically scanned devices for vulnerabilities using a variety of online databases

Georgetown University (Summer 2015)

Researcher at Georgetown's Computer Science Security Lab

- Wrote custom programs to automatically classify thousands of different proxies behavior
 - Discovered numerous free proxies that maliciously modify traffic
 - Compared behavior of free proxies to the behavior of Tor exit nodes
-

Personal Projects

snapperS (<https://github.com/ddworken/snapperS>)

- Wrote a Python program to assist in managing BTRFS subvolumes created by Snapper
- Allows easy permanent deletion of a file from all previous BTRFS snapshots

racython (<https://github.com/ddworken/racython>)

- Wrote a Racket interpreter in Python
 - Implemented recursion and local scope for variable bindings
-

Cybersecurity Work

- Honored by the Secretary of Defense for participation in the Department of Defense's bug bounty program
- Participated in HackerOne's inaugural H1-702 bug bounty program at DEF CON 24
- Ported Wi-Fi jamming functionality to [LANs.py](https://github.com/ddworken/LANs.py), an MITM tool with thousands of users
- Contributed code to [xsscrapy](https://github.com/ddworken/xsscrapy), an open source XSS and SQLi vulnerability scanner
- Helped fix bugs in Lets Encrypt, software that helps increase adoption of SSL through free automatically issued SSL certificates
